The pinvice is invariably more precise, especially as it has very small drill bits for drilling tiny holes. These include sanding discs, cutting discs and polishers.Electric drill controllers often have companion tools that can plug in to the same transformer, such as a small jigsaw, which is invaluable for many other tasks.This comes about because injection moulds do wear over time. The overall problem can't really be cured if the tooling is worn, the tooling is worn. If modellers want some kits, the original mould will have to be used, it will not be cost effective to make a new tool, and sometimes flash will occur and has to be dealt with.These tend to occur where the parts are thicker than others. One main example where it can happen is with figures, which, in smaller scale kits such as 135 and below, are going to be relatively small. Because of this they are usually moulded solid and the plastic therefore takes fractionally longer with these thicker parts to cool.This is likely because the tooling was not mothballed correctly. The steel tools can rust if a preservative has not been used, and these may be rust spots. Again, there is little that can be done with some of these old moulds. Sanding and filling is probably the only answer.As a Technical Consultant, Irvine worked on shows such as The Sky at Night, Tomorrows World and the original series of Robot Wars. As a Visual Effects Designer, Irvine worked on shows such as Rentaghost, Terry and June, Blakes 7, The Tripods, Edge of Darkness and To the Manor Born. He is perhaps best known for his work on Doctor Who, for which he was a Visual Effects Designer, from the 1970s to the 1980s. He is credited

with building the first K9 prop for the program. Nowadays, he makes appearances at sci-fi and Doctor Who conventions, often alongside K9, which he still operates. He also organizes and runs regular model shows. http://www.fotobielsko.pl/_upload/electrical-machines-2-lab-manual.xml

It deals with History, manufacture, as well as all Modeling tools needed for building All plastic kits. It's an amazing addition to any modeler's library!
